

ESD RetroFit Kit

REPLACEMENT FOR EXISTING UNITS

Our “ESD RetroFit Kit” is for existing roomside replaceable standard size ducted cleanroom units. This kit is specifically designed to allow facility maintenance personnel to adapt existing roomside replaceable units with the features and benefits that make the ESD Model 22 superior to other competitive products. Each kit comes complete with the ESD damper, retrofit jigs and fixtures, hardware, drawings, and a detailed instruction manual to make this a smooth conversion. The ESD Model 22 damper and adjustment mechanism make it ideal for applications where excellent aerosol and velocity uniformity are required, fine adjustment is desired, and when extremely low static pressure values are sought.

Installation

The ESD RetroFit Kit is to be installed in existing hood applications presently using “Butterfly” type dampers or no damper at all. The kit can easily be installed by using hand tools eliminating extended down time to equipment. We recommend not using the ESD RetroFit Kit if pressures are greater than 3” w.g.

Product Information

Part Numbers	
2' x 2' ESD RetroFit Kit (Aluminum)	E0707266
2' x 4' ESD RetroFit Kit (Aluminum)	E0707267
2' x 2' ESD RetroFit Kit (Stainless Steel)	E0707308
2' x 4' ESD RetroFit Kit (Stainless Steel)	E0707309
